

## Week 10

This week we received the good news that, when we've finished our work, we will be able to reopen Great Musgrave bridge without a weight restriction.

The report we commissioned, known as the CS454 Assessment Certification used a more refined technique than the previous assessment by the council.

It confirms that, despite the bridge's capacity being previously limited, our refurbishment work and resurfacing of the deck will remove the need for a weight restriction, restoring the bridge to full capacity.

We commissioned the report in agreement with Westmorland and Furness Council, who are the local highway authority for the B6259 over the bridge and have shared the findings with them.

After our work here is finished, we'll continue to inspect the bridge every year and carry out any necessary repair work to ensure it can continue to be safely used.
